Agentic AI

TravelVerse is building an agentic AI system called TravelBot. It consists of a primary orchestrator agent and three sub-agents

Agent	Role
Travel orchestrator	Receives user intent, plans, and delegates
Flight search agent	Queries flight APIs
Hotel booking agent	Books hotels on behalf of the user
Expense report agent	Generates and submits expense reports

Let's use the use case in the diagram to demonstrate how we can register AI agents and manage them in WSO2 Identity Server. As you can see, **admin** is the super Administrator of TravelVerse.

Onboarding AI Agents

As of now user **admin** has Administrative privileges in Travelverse. Therefore admin will be creating agents in the Travelverse organization.

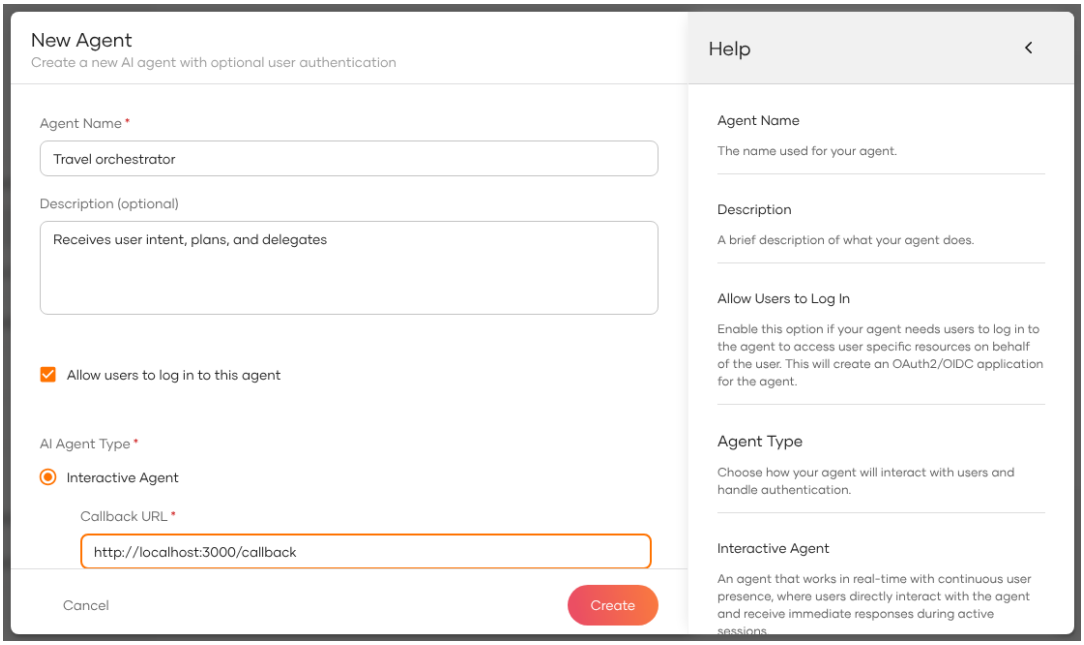

Lab 01. Register and Manage Agents

1. Create Agents

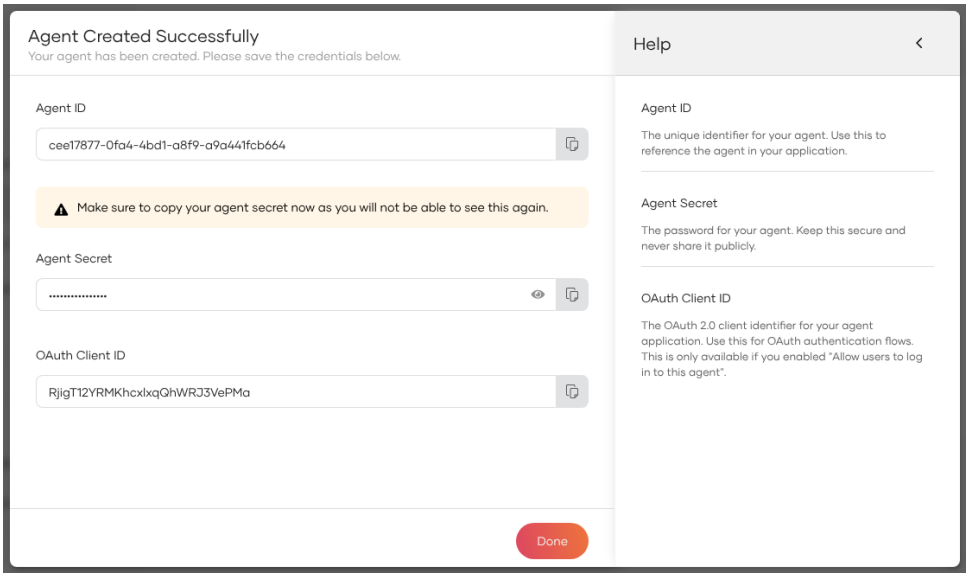

To learn how admin can register an AI Agent, follow these steps:

I. In the WSO2 Identity Server **Console,** from the menu click **Agents.**
II. Click **+ New Agent**.
III. In the opened up wizard,
    A. Add the **Agent Name, and Description** to the respective fields.
        1. Agent Name: Travel orchestrator
        2. Description: `Receives user intent, plans, and delegates`
    B. Tick **Allow users to log in to this agent**. The orchestrator talks to users and acts on their behalf, so it needs this. It creates an OAuth2/OIDC application for the agent and shows two more fields:
        1. **AI Agent Type**: select **Interactive Agent**, because users work with the orchestrator in real time. (**Background Agent** is for an agent that works on its own and only contacts the user when needed.)
        2. **Callback URL** (required for an interactive agent): the URL of the agent's application that receives the authorization code after the user logs in. For this lab, enter `http://localhost:3000/callback`.

CC BY 4.0

IV. Click **Create.**

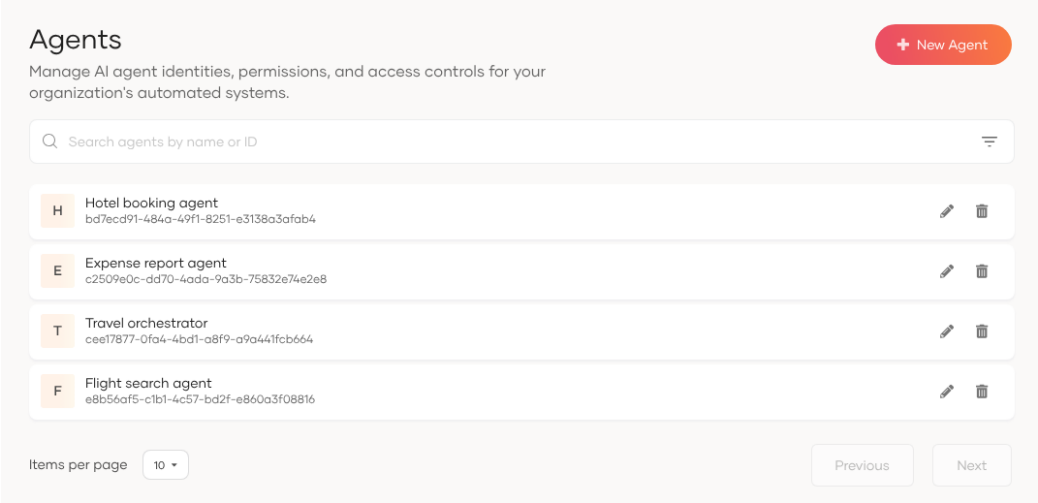

V. Copy the **Agent ID**, **Agent Secret** and **OAuth Client ID** now. The secret is shown only once.

VI. Click **Done.**

VII. Create the other three agents (Flight search agent, Hotel booking agent and Expense report agent) the same way, but leave **Allow users to log in to this agent** unticked: users don't log in to them, the orchestrator calls them. All four agents are then listed on the Agents page.

CC BY 4.0

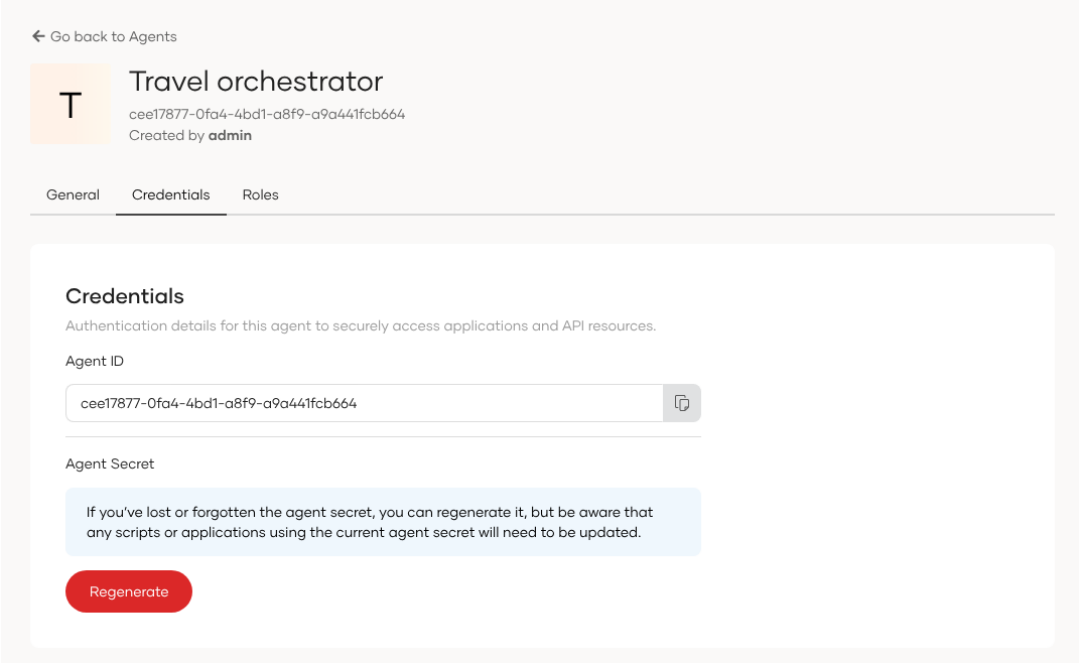

2. Regenerate Agent Secret

To regenerate the Agent Secret of the agent that you previously added, follow these steps:

1. In the menu click **Agents**, then click the **Travel orchestrator** agent.
2. Open the **Credentials** tab. It shows the Agent ID; the secret is not shown again.

CC BY 4.0

3. Click **Regenerate**, then **Proceed**. Copy the new Agent Secret from the dialog and click **Done**. The old secret stops working.

Try It

To verify whether the agents you defined are correctly updated, follow these steps:

1. Expand Agents menu Item and view the agents.
2. You should see **Travel orchestrator** listed as an agent
3. Select the Travel orchestrator agent, and click the **Credentials** tab.
4. You should see **Agent ID** only.
